## SOUTH PORTALS DESIGN AND TEXTURES

### PORTAL DESIGN DETAIL

THE DESIGN OF THE SOUTH PORTALS EMPHASIZES THE BLENDING OF THE NATURAL VEGETATION AND ROCK FORMATIONS OF THE IMMEDIATE SURROUNDING AREA.

THE PORTAL SHAPE MIMICS THE SHAPE OF THE TUNNEL BARRELS. AS THE PORTAL PROTRUDES FROM THE FACE OF THE MOUNTAIN, THE PORTAL IS CUT BACK TO THE SAME PROFILE OF THE MOUNTAIN SLANT AND IS COVERED WITH VEGETATION AND ROCK OUTCROPPINGS.

THE ROCK OUTCROPPINGS ARE CONSTRUCTED OF CONCRETE AND ARE DISGUISED TO FORM A ROCK FALL PROTECTION BARRIER BETWEEN USERS OF THE TUNNEL AND ANY DEBRIS FALLING FROM THE MOUNTAIN ABOVE.
